61. All Private Bills for Acts of Incorporation shall be so framed as to incorporate by reference the clauses of the General Acts relating to the details to be provided for by such Bills:—Special grounds shall be established for any proposed departure from this principle, or for the introduction of other provisions as to such details, and a note shall be appended to the Bill indicating the provisions thereof in which the General Act is proposed to be departed from. Bills which are not framed in accordance with this Rule shall be re-cast by the promoters and re-printed at their expense before any Committee passes upon the clauses.

OFFICE OF THE BOARD OF HORTICULTURE,

DEPARTMENT OF AGRICULTURE,

9th June, 1905.

The following Rules and Regulations adopted by the Board of Horticulture, at a meeting held at the office of the Board on the 9th day of June, 1905, are published in pursuance of section 7 of the "Horticultural Board Act."

J. R. ANDERSON,

Deputy Minister of Agriculture.

RULES AND REGULATIONS

Made and published under authority of Section 7 of the "Horticultural Board Act."

—o—

Title.

1. These Regulations may be cited as the "Horticultural Regulations."

Definitions.

2. In these Regulations the word "pests" shall mean and include woolly aphis, apple tree aphis, scaly bark louse, oyster shell bark louse, San Jose scale, red scale, borers, codlin moths, currant worms, caterpillars, or other known injurious insects, root gall, apple tree anthracnose, and all fungous diseases. The "Board" shall mean the Provincial Board of Horticulture.

Notification of the presence of Pests.

3. All nurserymen, fruit-growers, and all persons owning, occupying or managing an orchard, garden or nursery infected with any pest, shall notify the member of the Board for the district in which such orchard, garden, or nursery is located, or the Secretary or Inspector, or the agent of the Board in the district, of the fact that such orchard, garden, or nursery is so infected.

Inspection of Nursery Stock.

4. All importers, agents for importers or consignees of nursery stock, trees or plants, must give notice to the Inspector of Fruit Pests, upon the arrival of any nursery stock, trees, or plants, before the removal of such nursery stock, trees, or plants from any dock, wharf, mole, station, or warehouse where such nursery stock, trees, or plants have been landed, and if such nursery stock, trees, or plants are found to be free of insect pests and fungous diseases, the said Inspector of Fruit Pests shall issue a certificate to that effect; and all such nursery stock, trees, or plants, if found to be infected with any insect pest or fungous disease, shall be dealt with according to the Rules and Regulations of the Board. Certified invoices of all shipments of nursery stock, trees, and plants must be furnished at the time such shipments are delivered for inspection.

Disinfection of Nursery Stock, Trees and Plants.

5. All persons owning or having in their possession nursery stock, or trees and plants of any kind, infected with insect pests or fungous disease, shall cause the same to be disinfected and cleansed by using the remedies herein prescribed, or such other insecticides and fungicides as may be found effective, and are approved by a member of the Board or the Inspector of Fruit Pests, and no such inspected nursery stock, trees or plants shall be sold, forwarded, distributed or parted with until a certificate of the satisfactory cleansing thereof shall have been obtained from a member of the Board or his agent, or the Inspector of Fruit Pests. Such certificate shall remain in force for three months from date of issue unless revoked by further inspection. Any member of the Board, or the Inspector of Fruit Pests, may order the destruction, by rooting out and burning, of all infected nursery stock, trees, or plants of any kind, if, in the opinion of such member of the Board or Inspector of Fruit Pests, such a course is considered expedient in the interests of the fruit-growing industry.

Inspection of Imported Fruit.

6. All importers, agents for importers or consignees of fruit must give notice to a member of the Board, the Inspector of Fruit Pests, or any agent appointed by the Board, upon the arrival of any and all shipments of fruit; and all fruit and fruit packages imported into this Province shall be inspected, and if found to be free from insect pests and fungous disease a clean certificate shall be issued therefor in conformity with the Rules and Regulations of the Board: Provided, however, that no fruit or fruit packages imported into this Province shall be removed from any dock, wharf, mole, or station where such fruit and fruit packages have been landed, before inspection, and such clean certificate thereof shall have been obtained, and all such fruit and fruit packages as may be found infected with any insect pest or fungous disease shall be either destroyed by the importers thereof, by such process and within such time as any member of the Board, the Inspector of Fruit Pests, or any agent appointed by the Board, may direct, or shall be re-shipped, within such time as any member of the Board, the Inspector of Fruit Pests, or any agent appointed by the Board, may direct, by the importers thereof, to some point without the Province: Provided, however, that fruit which has been condemned shall not be transported through the Province except for deportation. Packages containing infected fruit shall be marked with a distinctive mark or brand at the time of the inspection thereof by the inspecting officer. It shall be an offence against the Rules and Regulations of the Board of Horticulture to deface or remove such mark or brand.

Quarantine Regulations.

7. Transportation companies, express companies, wharfingers, or warehousemen receiving or conveying nursery stock, trees, plants or fruit shall in no case deliver, or cause to be delivered, such nursery stock, trees, plants or fruit, or any portion thereof, to the owners, consignees, or any other person whatsoever, without the written permission of the quarantine or inspecting officer. All imported nursery stock, trees and plants shall, before being distributed in any part of British Columbia, be delivered at the Provincial Disinfecting Station in Vancouver, and there unpacked, inspected, and, if necessary, treated according to regulations of the Board, and after such inspection and treatment shall be carefully re-packed and forwarded, with all possible dispatch, to their destination, accompanied with a certificate of the inspecting officer.

Inspection of Imported and Home-grown Fruit.

8. All fruit, whether imported or grown in this Province, or exposed for sale, shall be subject to inspection under the authority of the Board, and if found to be infected with any injurious insect pest or fungous disease, shall be quarantined, or may be destroyed at the expense of the owner of said fruit, by such methods as the Board or

its agents may direct. Packages containing quarantined fruit shall be marked with a distinctive mark or brand at the time of the inspection thereof by the inspecting officer. It shall be an offence against the Rules and Regulations of the Board of Horticulture to deface or remove such mark or brand.

Stencilling and Labelling.

9. All persons shipping, sending or delivering any fruit, fruit trees, scions, cuttings, or plants within the Province shall place upon or securely attach to each box, crate, or other package or parcel containing the same, a distinct stamp, mark, or label showing the name of the producer and shipper or sender, and the locality where grown. Boxes and barrels containing fruit shall be stencilled or stamped accordingly with letters not less than three-quarters of an inch in length.

Treatment of Nursery Stock.

10. Infected nursery stock shall, before being distributed, be disinfected by dipping in No. 1 spraying mixture (lime, sulphur and salt) or in a solution of one pound caustic soda (concentrated lye) and two pounds whale oil soap to every five Imperial gallons of water thoroughly dissolved, and applied at 130° Fahrenheit in a vat or any suitable vessel, or the said nursery stock may be disinfected by covering with an air-tight tent or box, and for each and every 100 cubic feet of space therein one ounce of fused cyanide of potassium (98 per cent.), one fluid ounce of sulphuric acid, and three fluid ounces of water shall be used. The cyanide of potassium shall be placed in an earthenware vessel, the water poured over the said cyanide of potassium, afterwards adding sulphuric acid, and the tent or box to be immediately closed tightly and allowed to remain closed for not less than forty-five minutes. Treatment for disinfection shall continue until all insect pests or their larva are destroyed.

Destruction of Packages.

11. All boxes, crates or other packages or wrappings which have contained infected nursery stock shall be destroyed by fire immediately after the removal of the contents thereof.

Remedies.

12. For the extirpation of insect pests and fungous diseases the Board has adopted the following formulæ :—

Spray No. 1.

(Winter Spray for Woolly Aphis and Scale Insects.)

Ingredients.

Lime, unslacked	30 lbs.
Sulphur, powdered	20 "
Salt, coarse	15 "
Water	60 gals.

Directions.

Place 10 pounds of lime and 20 pounds of sulphur in a boiler with 20 gallons of water, and boil over a brisk fire for two hours, until the sulphur is thoroughly dissolved. It will then be amber-coloured. Next place 20 pounds of lime in a cask and pour water enough over it to thoroughly slack it. Add the salt. When dissolved, add to the lime and sulphur and boil half an hour longer. Add enough water to make 60 gallons. Apply lukewarm.

Directions for Use.

Spray when the trees are dormant, or as soon as the leaves fall, and again in the spring before the buds swell. A good force-pump should be used, and care must be taken to thoroughly cover the infected trees with the mixture, which should be constantly stirred when applying.

The above preparation can be obtained in solid form, requiring only the addition of water to be ready for use, and, owing to the difficulty of preparation, the Board advises the adoption of this method. Care should be taken to add the necessary quantity of water to reduce the mixture to the strength recommended above.

NOTE.—To ensure freedom from lumps, it is advisable to pass the mixture through a wire sieve or strainer. Nozzles which are self-cleaning and adjustable, such as the "Improved Bean" and "Bordeaux," are best adapted for distributing this and other spraying mixtures which contain a considerable amount of solid matter.

Spray No. 2.

(Summer Spray for Aphis.)

Ingredients.

Quassia chips.....	8 lbs.
Whale oil soap	7 "
Water.....	100 gals.

Directions.

Boil the quassia chips in about one gallon of water to each pound quassia chips for one hour. Dissolve the soap in hot or boiling water; strain and mix both together, and add the required amount of water to make 100 gallons altogether.

To be used with spray pump with as much force as possible. This is the standard remedy for aphis in hop yards, and has given good results against other forms of aphides wherever tried, with no injury to foliage.

Spray No. 4.

(Bordeaux Mixture for Apple-scab and other Fungous Diseases.)

Ingredients.

Sulphate of copper (bluestone)	4 lbs.
Fresh unslacked lime	4 "
Water	50 gals.

Directions.

In a barrel place 25 gallons of water. Weigh out 4 pounds of sulphate of copper; then tie the same in a coarse gunny-sack and suspend it just beneath the surface of the water. By tying the bag to a stick laid across the top of the barrel, no further attention will be required.

In another vessel slack the 4 pounds of lime, using care in order to obtain a very smooth paste free from grit and small lumps. To accomplish this, it is best to add only a small quantity of water at first, say two or three pints. When the lime begins to crumble and the water disappears, add more water gradually.

If added carefully and slowly a smooth paste will be obtained provided the lime is of good quality. Then add sufficient water to bring the whole up to 25 gallons.

When the copper sulphate is entirely dissolved and the lime cool, pour the lime, milk and copper sulphate solution slowly together in a barrel, and stir well with a broad wooden paddle to ensure perfect freedom from lumps of lime; it is often necessary to pass the whole mixture through a fine wire sieve or strainer before commencing to spray. For apple and pear-scab, spray before the buds open. Repeat before the blossoms expand, and again after the blossoms fall. If necessary, repeat again in ten days' time; this will depend upon weather conditions and variety of fruit treated.

The Vermorel nozzle, which distributes the spray in a mist-like foam, is probably the best for use with this mixture.

Spray No. 8, Hellebore.

(For Pear and Cherry Slugs, Gooseberry and Currant Worms.)

For use with spray pump, take 1 ounce hellebore to 1 gallon of water. Steep the hellebore in one pint of boiling water for an hour, then add the balance of water, cold. Hellebore is, however, generally used in the powder form, dusted on the trees or plants treated. A machine for the purpose is the best method of using it on a large scale. In all cases care should be taken to get fresh hellebore to ensure satisfactory results.

Spray No. 9—Paris Green Spray.

(For Codlin Moth, Caterpillars and other Leaf-eating Insects.)

Ingredients.

Paris green.....	4 ozs.
Fresh slacked lime	1 lb.
Water	50 gals.

Make a paste of the Paris green with a little water. Make the lime into milk of lime with water. Mix all together and add water to make the required amount.

Paris green is a heavy powder and does not remain long in suspension; hence it must be kept constantly stirred when using. Be sure that good lime is used to prevent

burning of foliage. Apply with spray pump. London purple may be used in place of Paris green, but is not usually so reliable.

Paris green or London purple can generally be used to advantage with Bordeaux mixture, making a combined fungicide and insecticide. Use in the proportions given above, viz., 4 ounces Paris green to 50 gallons Bordeaux mixture.

Spray No. 15.—Lye and Soap Wash.

(For winter use only.)

Ingredients.

Concentrated lye	1 lb.
Whale oil soap	1 lb.
Water	5 gals.

Directions.

Dissolve the lye and soap in the water, heated. The mixture may be applied with a swab or brush, or with the spray pump if used warm. One thorough application in the fall and another before growth commences in the spring should be made when used against woolly aphides. This is also an excellent wash to remove moss or lichen from trees and bushes, and for this purpose alone half the amount of soap is sufficient.

For further information regarding insect pests and spraying mixtures see Horticultural Bulletin, which can be obtained from members of the Board, or by application to the Department of Agriculture, Victoria.

13. Where pests or fungous diseases are found to exist during the growing season, while the trees are in leaf, spraying must be done and such remedies applied as shall be recommended by or under authority of the Board from time to time, so that the insects or diseases can at least be held in check until the stronger washes of the dormant season can be safely applied.

Spray No. 16.

For spraying Mildew of Gooseberry, Rose bushes and other plants affected:—

Potassium sulphide (liver of sulphur), $\frac{1}{2}$ to 1 oz. to 1 gallon water; on tender plants the $\frac{1}{2}$ oz. will be sufficient.

This preparation loses its strength on standing, so should be made immediately before using. It is particularly valuable for surface mildews.

Hop-fields.

14. Where hop-fields are infected with the hop-louse, spraying must be done as the Board from time to time shall recommend.

Inspection Fees.

(On Nursery Stock, Trees and Plants.)

15. The fees for inspection of apple, pear, plum, cherry and other fruit trees shall be as follows:—

On all consignments numbering—

12 Trees and under	\$1 00
Over 12 and under 25	\$1 50

Over \$25.00 and under \$50.00.....	\$3 50
And 5 % additional on the value over \$50.
